

Stakeholders

Facilitator (senior software engineer) - Aiden Jolley-Ruhn

Software developer (a member of the software development team) - Adhish Malhotra

Customer (not a part of the group) - Alypsis Inc. Aromatic

End users - Employees at Alypsis Essential oils.

A meeting was organized by the facilitator and facilitator and the software developer shared their views on how to approach the solution for this problem. Sticky notes and many other elements were used to brainstorm different ideas and solutions. The screenshots from the Jam Board have been shared at the end of the lab report.

Product vision and scope

Our product vision is to create a web-based software for Alypsis Essential Oils. The software shall allow the company to automatically update the google sheets when an employee from the company enters the data in their inventory management tool, katana. The web application is also supposed to update the company's website on Shopify by retrieving the data from google sheets. Moreover, it should also update the accounts of the company on Quickbooks.

Vision Statement

Our vision is to provide reliable software solutions to small businesses in order to solve their problems.
