

User Stories

User story 1

User story for Employee 1 of the company

As an employee 1 of Alypsis Essential Oils,

I want that the software must be user friendly and easy to use,

In order to reduce the customer support as much as possible and it will help in making all the activities time efficient.

Acceptance criteria

The ability to undo/delete a command which might be given by mistake.

If an employee of Alypsis essential oils enters a command by mistake, he/she must be able to delete that command, which would further delete the action done in google sheets, katana, Shopify, and Quickbooks.

User story 2

User story for the software developer of the software

As a software developer for Alypsis Essential Oils,

I want that I am able to achieve all the user requirements in time,

In order to deliver a software product that is flexible, scalable, extendable (depending on the user's need), and portable

Acceptance criteria

Easy access to different APIs for different tools that are used by the company

In order to develop software for the employees of Alypsis Essential oils, the first and foremost requirement is to have access to different APIs of the web-based tools which company uses (for example Katana, Shopify, and quick books)

User Story 3

User story for the owner of the company

As an owner of Alypsis Essential Oils,

I want that the software must be easy to manage,

So that I don't have to contact the customer support, which is the team of software developers who built this software if any bugs or issues are detected while using the software.

Acceptance criteria

Maintenance of the software/website

The software must be updated depending on the newest version of programming languages supported by the browser. New features must be added depending on the demand of the users.

User story 4

User story for the manager of the company

As a manager of Alypsis Essential Oils,

I want that the software generates a summary of all items which have been loaded in the inventory,

So that I can easily go through the summary every week and realize what has been added to the stock and which employee has added that item to the inventory.

Acceptance criteria

Periodic generation of bill of materials

The software must be able to generate a bill of materials which must include a table of all the items which were recently stocked in the warehouse. Moreover, the software must include all those essential oils which are running low on stock and needs re-stocking. The bill of materials must be generated periodically. The manager must be able to set the time period in which they wish to be updated about the stocks.

User story 5

User story for Employee 2 of the company

As an employee 2 of Alypsis Essential Oils,

I want that the software to have the ability to sort the items depending on different filters like price, name, quantity, etc.

So that it is easier to navigate within different items in the inventory.

Acceptance criteria

Search bar with different filters

The software must have the ability to search different essential oils depending on different filters like price low to high, high to low, customer review, etc.
